

1) Write the HTML file to create the below web page

### User Registration Form

User Name	Click or tap here to enter text.
Password	Click or tap here to enter text.
Country	<input type="radio"/> India <input type="radio"/> China <input type="radio"/> UK
Preferred Date	Click or tap to enter a date.

☐ Check this to receive an acknowledgement.

Validate	Reset
----------	-------

2) Read the above form data using java script, create JSON Object and print that object to browser console

Example:

```
{"username":"jatin","password":"1233","country":"india","preferreddate":"12-10-2021","licenceagreement": true}
```

3) Construct the JSON Object from the following string and display each field value in HTML Document

```
var employee = "id:101, name: Rohan Kumar,salary:60000";
```

Employee Management System:

Employee ID: 101

Employee Name: Rohan Kumar

Employee Salary: 60000
